# Speed Zone/ Red Light Camera Update

# Speed Zone/ Red-Light Camera Update

## How do red light cameras work?

The automated red-light cameras measure a vehicle's location and movement when a stop light changes from yellow to red. A video and a series of photographs are recorded to document vehicles traveling through the active red light. The date, time, and location of the violation and the license plate of the violator's vehicle are recorded. Following the proper identification of the registered owner of the vehicle using the license plate number, the registered owner is mailed a citation, which includes the violation photos.

- No citation for a violation will be issued unless the video evidence has been reviewed and certified by a member of the Portsmouth Police Department.
- Under Virginia law, the red-light cameras can be installed at no more than nine intersections. Conspicuous signs must be installed at all intersections where the cameras are in use.
